DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 10, 11, 17, 19, 28, 29, 35, 37 – 45 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of record, in single or in combination, does not disclose explicitly the limitation of

wherein the threshold is equal to a maximum aggregate multicast bandwidth output of the access router minus a bandwidth output required to deliver the multicast traffic flow to the user device as disclosed in claim 1;

wherein the threshold is equal to a maximum aggregate multicast bandwidth output of the access router minus a bandwidth output required to deliver the multicast traffic flow to the user device as disclosed in claim 19;

a join request manager within an access router, the access router comprising a central processing unit (CPU) and a memory unit and operable to replicate multicast traffic flows for communication to one or more user devices within user systems coupled to the access router using a link, the join request manager operable to: receive an Internet group management protocol (IGMP) join request, the request being received from one of the user devices within one of the user systems and communicated using one or more packets; and drop the one or more packets if: utilization of the CPU is above a first threshold, the utilization of the CPU being measured in terms of a percentage of a maximum processing

capacity of the CPU, the utilization of the CPU above the first threshold impairing operation of the access router; usage of the memory unit is above a second threshold, the usage of the memory unit being measured in terms of a percentage of a maximum storage capacity of the memory unit, the utilization of the CPU above the second threshold impairing operation of the access router; an aggregate multicast bandwidth output of the access router is above a third threshold equal to a maximum aggregate multicast bandwidth output of the access router minus a bandwidth output required to deliver the multicast traffic flow to the user device, the maximum aggregate multicast bandwidth output of the access router being equal to a maximum aggregate bandwidth output minus an aggregate bandwidth output reserved for unicast traffic; or an aggregate multicast bandwidth over the link is above a fourth threshold equal to a maximum aggregate multicast bandwidth over the link minus a bandwidth required to deliver the multicast traffic flow to the user device, the maximum aggregate multicast bandwidth over the link being equal to a maximum aggregate bandwidth minus an aggregate bandwidth output reserved for unicast traffic as disclosed in claim 37;

wherein the threshold is equal to a maximum aggregate multicast bandwidth over the link minus a bandwidth required to deliver the multicast traffic flow to the user device as disclosed in claim 38;

wherein the threshold is equal to a maximum aggregate multicast bandwidth over the link minus a bandwidth required to deliver the multicast traffic flow to the user device as disclosed in claim 42.

2. Additionally, all of the further imitations in claims 10, 11, 17, 28, 29, 35, 39, 40, 41, 43, 44, 45 are allowable since the claims are dependent upon the independent claims.
3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
